ACS800-04LC

Selecting and ordering your drive

Build up your own ordering code using the type designation key below or contact your local ABB drives sales office and let them know what you want. Use page 3 as a reference section for more information.

Type designation: **ACS800** - **04** - **XXXX** - **2** + **XXXX**

Product series	ACS800
Types and construction	04-X04-14-04LC-X04LC
Ratings	XXXX
Voltages	2
Options	XXXX

ABB industrial drives

ABB industrial drives

ABB industrial drives are designed for industrial applications, and especially for applications in process industries such as the pulp and paper, metals, mining, cement, power, chemical, and oil and gas industries. ABB industrial drives are highly flexible AC drives that can be configured to meet the precise needs of these applications, and hence order-based configuration is an integral part of the offering. These drives cover a wide range of powers and voltages, including voltages up to 690 V. ABB industrial drives come with a wide range of built-in options. A key feature of these drives is programmability, which makes adaptation to different applications easy.

Industrial design

ABB industrial drives are designed with current ratings to be used in industrial environments for applications requiring high overloadability. The heart of the drive is DTC, direct torque control, that provides high performance and significant benefits: e.g. accurate static and dynamic speed and torque control, high starting torque and long motor cables. Built-in drive options make the installation work fast and easy.

One of the most significant design criteria of ABB industrial drives has been the long lifetime. Wearing parts such as fans and capacitors have been selected accordingly. Together with the extensive protection features this results in excellent reliability in the demanding industrial market.

Drive modules

Drive modules are designed to be built into a customer's own cabinet. The modules typically have an IP00 or IP20 enclosure class. ABB's module package also includes cabinet assembly documentation.

Type designation

This is the unique reference number that clearly identifies your drive by construction, power rating voltage and selected options. Using the type designation you can specify your drives from the wide range of options available, customer specific options are added to the type designation using the corresponding + code.

ABB's module offering - common features

ABB industrial drive modules are meant for system integrators and/or machine builders who are making their own applications, which include the cabinet structure as well as the software features needed.

ACS800 modules include everything that is required for a complete drive, there is always a built-in harmonic filtering choke, for example. There is also a wide selection of built-in options such as EMC filtering and different I/O and communication options. In addition to these a selection of external accessories is also available. All the modules can be mounted side by side.

In addition to the modules being designed for cabinet assembly, cabinet assembly documentation is included. The documentation gives examples of different cabinet installations, examples of drawings, and hints on the selection of auxiliary equipment. The flexibility and programmability of the modules makes them very viable for various application needs in different areas of industry.

Functional safety

The ABB functional safety solution complies with the requirements of the European Union machinery directive 2006/42/EC. This directive is associated with standards such as IEC 62061 (Safety Integrity Level) and ISO 13849-1 (Performance Level), which require both a documented and proven safety performance and life cycle approach to safety. Safe torque-off is a certified solution offering SIL2 and PL d (Cat.2) safety levels.

ABB drives can be provided, as an option, with the safe torque-off function. Safe torque-off can be used for the prevention of unexpected startup and represents a cost-effective and certified solution for basic safety. Other safety functions include safe stop 1 (SS1) and safely-limited speed (SLS), which can be used to achieve SIL2 or PL d (Cat.3) safety levels.

ACS800 multidrives, code 3AFE68248531 EN,
ACS800 single drives, code 3AFE68375126 EN.

Technical data

Mains connection		Environmental limits			
Supply voltage	3-phase U_{3IN} = 380 to 415 V, $\pm 10\%$ 3-phase U_{5IN} = 380 to 500 V, $\pm 10\%$ 3-phase U_{7IN} = 525 to 690 V, $\pm 10\%$	Ambient temperature	-40 to +70 °C		
Frequency	48 to 63 Hz	Transportation	-40 to +70 °C		
Power factor	$\cos\phi_1 = 0.98$ (fundamental) $\cos\phi = 0.93$ to 0.95 (total)	Storage	0 to 55 °C, no frost allowed		
Efficiency (at nominal power)	> 98	Operation in totally enclosed cabinet	45 to 55 °C at reduced output power (0.5% /1 °C)		
Motor connection		Relative humidity	5 to 95%, no condensation allowed		
3-phase supply voltage	Output voltage: 0 to $U_{3IN} / U_{5IN} / U_{7IN}$	Vibration	0.7 g, 13.2 Hz to 100 Hz, 1 mm displacement 2 to 13.2 Hz		
Frequency	0 to ± 300 Hz	Cooling Method	Liquid-cooled, closed loop		
Field weakening point	8 to 300 Hz	Internal cooling circuit	Drinking water +42 °C max, 42 to 48 °C at reduced output power (1.0% /1 °C)		
Motor control	ABB's direct torque control (DTC)	External cooling circuit with optimal liquid cooling unit	Industrial or sea water +38 °C max, 38 to 45 °C at reduced output power (1.0% /1 °C)		
Torque control:	Torque step rise time: <5 ms with nominal torque <5 ms with nominal torque	Altitude	Without derating With derating ~ (1%/100 m) (690 V units 1000 to 2000 m with derating)		
Open loop	Non-linearity: $\pm 4\%$ with nominal torque	Storage	IEC 60721-3-1, class 1C2 (chemical gases), Class 1S2 (solid particles)		
Closed loop	$\pm 3\%$ with nominal torque	Transportation	IEC 60721-3-2, Class 2C2 or 3C2* (chemical gases), Class 2S2 (solid particles)		
Speed Control:	Static accuracy: 10% of motor slip 0.01% of nominal speed	Operation	IEC 60721-3-3, Class 3C2 (chemical gases), Class 3S2 (solid particles without air inlet filters)		
Open loop	Dynamic accuracy: 0.3 to 0.4% sec. with 100% torque step	C = chemically active substances S = mechanically active substances * = coated circuit boards			
Closed loop	0.1 to 0.2% sec. with 100% torque step	Product compliance			
Enclosure		CE, UL, CSA, GOST-R Low Voltage Directive 2006/95/EC Machinery Directive 2006/42/EC EMC Directive 2006/108/EC Quality assurance system ISO 9001 and Environmental system ISO 14001			
EMC according to EN 61800-3					
2 nd environment, unrestricted distribution category C3 - as option in ACS800-04 up to frame size R8					
1 st environment, restricted distribution category C2 as option up to 1000 A input current					

Liquid-cooled modules ACS800-04LC/-X04LC

Solutions for high power drives

The liquid-cooled ACS800 frequency converter modules offer robust design for high-power applications. The liquid-cooled ACS800 product family provides advanced reliability and availability in all industry sectors.

Customer specific design

The liquid-cooled ACS800 is available for single and system drive purposes. The modular hardware design and advanced software features enable the most sophisticated drive solutions. Our customised solutions provide the optimum customer benefits for any demanding application. Our product know-how is at your service.

Advanced liquid-cooling

The ACS800 can utilize direct liquid-cooling which makes the converter extremely compact and silent. Liquid-cooling reduces the need for high-power filtered air cooling in the installation rooms. Along with the high efficiency, direct liquid-cooling offers low noise and easy heat transfer without air filtering problems.

Support for cabinet assembly

A full selection of both mechanical and electrical installation kits is available for liquid-cooled ACS800 frequency converter modules. These make cabinet installation into RITTAL TS8 cabinets efficient and easy. A large variety of support material such as dimensional drawings and circuit diagrams is also available for making cabinet assembly, planning and implementation as straightforward and rapid as possible. It is also possible to use optional installation racks instead of cabinets. Installation racks are a compact and cost efficient way to assemble a full liquid-cooled ACS800 frequency converter drive system inside a closed environment such as, for example, a container without an existing air-conditioning system.

Full selection of drive module products

The liquid-cooled ACS800 frequency converter module product family includes diode and regenerative IGBT supply units, a large variety of inverter units, high power dynamic braking unit modules, and liquid cooling units for all demanding customer needs. Both diode supply units and regenerative IGBT supply units are available with a wide power range and high power density. When high capacity braking is needed and the drive cannot be equipped with a regenerative supply unit, it is possible to use three-phase liquid-cooled dynamic braking unit modules. With a liquid cooling unit it is possible to add supply, inverter and brake unit piping and heat exchangers to the same closed-loop cooling system. The liquid-cooled modules are available in both multidrive and single drive modules.

¹⁾ Pressure loss 100 kPa. Hydrostatic pressure loss 120 kPa due to 2 m height difference.

Dimensions

Frame size	Height mm	Width mm	Depth ¹⁾ mm	Weight kg
D3	975	311	474	140
D4	975	311	474	210
R8i	918	214	478	115

Nominal ratings	
$I_{\text{cont,max}}$	Rated current available continuously without overloadability at 42 °C liquid temperature.
I_{max}	Maximum output current. Available for 10 s at start, otherwise as long as allowed by drive temperature. Note: max. motor shaft power is 150% P_{hd} .
Typical ratings: No-overload use	
$P_{\text{cont,max}}$	Typical motor power in no-overload use.
Light-overload use	
I_N	Continuous base current allowing 110% overload for 1 min /5 min.
P_N	Typical motor power in light-overload use.
Heavy-duty use	
I_{hd}	Continuous base current allowing 150% overload for 1 min /5 min.
P_{hd}	Typical motor power in heavy-duty use.
Losses	
P_{loss}	Power loss conducted to coolant.

The current ratings are the same regardless of the supply voltage within one voltage range.
